Notes regarding the operating manual

Symbols

Warning of electrical voltage

This symbol indicates dangers to the life and health of persons due to electrical voltage.

Warning

This signal word indicates a hazard with an average risk level which, if not avoided, can result in serious injury or death.

Caution

This signal word indicates a hazard with a low risk level which, if not avoided, can result in minor or moderate injury.

Note

This signal word indicates important information (e.g. material damage), but does not indicate hazards.

Info

Information marked with this symbol helps you to carry out your tasks quickly and safely.

Follow the manual

Information marked with this symbol indicates that the operating manual must be observed.

You can download the current version of the operating manual and the EU declaration of conformity via the following link:

Airgoclean® 250 E

<https://hub.trotec.com/?id=44775>

Safety

Read this manual carefully before starting or using the device. Always store the manual in the immediate vicinity of the device or its site of use.

Warning

Read all safety warnings and all instructions.

Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.

Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.

- Do not use the device in potentially explosive rooms or areas and do not install it there.
- Do not use the device in aggressive atmosphere.
- Do not operate the device near open fire or gas appliances.
- Only put up the device in an upright, stable position on firm ground.
- Let the device dry out after a wet clean. Do not operate it when wet.
- Do not use the device with wet or damp hands.
- Do not expose the device to directly squirting water.
- Do not expose the device to liquids as it is not protected against splash water.
- Never insert any objects or limbs into the device.
- Do not cover or transport the device during operation.
- Do not sit on the device.
- This appliance is not a toy! Keep away from children and animals. Do not leave the device unattended during operation.

- Check accessories and connection parts for possible damage prior to every use of the device. Do not use any defective devices or device parts.
- Ensure that all electric cables outside of the device are protected from damage (e.g. caused by animals). Never use the device if electric cables or the power connection are damaged!
- The electrical connection must correspond to the specifications in chapter Technical data.
- Insert the mains plug into a properly secured mains socket.
- Observe the technical data when selecting extensions to the power cable. Completely unroll the extension cable. Avoid electrical overload.
- Before carrying out maintenance, care or repair work on the device, remove the mains plug from the mains socket. Hold onto the mains plug while doing so.
- Switch the device off and disconnect the power cable from the mains socket when the device is not in use.
- Do not under any circumstances use the device if you detect damages on the mains plug or power cable. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
Defective power cables pose a serious health risk!
- When positioning the device, observe the minimum distances from walls and other objects as well as the storage and operating conditions specified in the Technical data chapter.
- Make sure that the air inlet and outlet are not obstructed.
- Make sure that there are no loose items or dirt located in the immediate surroundings of air inlet and air outlet.
- Do not remove any safety signs, stickers or labels from the device. Keep all safety signs, stickers and labels in legible condition.
- Do not expose the device to heat or direct sunlight.
- Make sure that the suction side is kept free of dirt and loose objects.
- Dispose of replaced filters properly, especially after filtering substances hazardous to health (e.g. asbestos or spray paint mists)
- Never use the device as storage place or footstep.
- Never select automatic mode if the device is used for virus filtration.

Intended use

Use the device for cleaning the air as well as for odour elimination (ionization) in interior spaces only whilst adhering to the technical data and safety instructions.

Improper use

- Do not place the device on wet or flooded ground.
- Do not place any objects, e.g. clothing, on the device.
- Do not use the device outdoors.
- Do not use the device in bathrooms and rooms with a high humidity level.
- Do not use the device in rooms where large amounts of dust are produced, e.g. in production halls, workshops or on construction sites.
- Moreover, the integrated filter system is not suited for removing dusts that are potentially harmful to health (e.g. pollutants) from the air.
- Any operation other than as described in this manual is prohibited. Non-observance renders all claims for liability and guarantee null and void.
- Any unauthorised modifications, alterations or structural changes to the device are forbidden.

Personnel qualifications

People who use this device must:

- be aware of the dangers that occur when working with electrically driven air cleaners.
- have read and understood the operating manual, especially the Safety chapter.

Residual risks

Warning of electrical voltage

Work on the electrical components must only be carried out by an authorised specialist company!

Warning of electrical voltage

Before any work on the device, remove the mains plug from the mains socket!

Do not touch the mains plug with wet or damp hands. Hold onto the mains plug while pulling the power cable out of the mains socket.

Warning

Dangers can occur at the device when it is used by untrained people in an unprofessional or improper way! Observe the personnel qualifications!

Warning

The device is not a toy and does not belong in the hands of children.

**Warning**

Risk of suffocation!

Do not leave the packaging lying around. Children may use it as a dangerous toy.

Note

Do not operate the device without a HEPA carbon filter inserted!

Note

Do not operate the device without an air filter inserted into the air inlet!

Without the air filter, the inside of the device will be heavily contaminated. This could reduce the performance and result in damage to the device.

Note

Do not use abrasive cleaners or solvents to clean the device.

Behaviour in the event of an emergency

1. Switch off the device.
2. In an emergency, disconnect the device from the mains feed-in: Hold onto the mains plug while pulling the power cable out of the mains socket.
3. Do not reconnect a defective device to the mains.

Information about the device**Device description**

The device serves to filter the room air with the aim of reducing slight and medium contaminations and odours in order to improve the air quality. It is equipped with a powerful fan sucking in the air at the front. The air flows through the filter and is cleaned. Afterwards the fan releases the clean air back into the room.

The device contains a 2-1-filter on each side, consisting of a HEPA and carbon filter and a separate prefilter on each side.

The device uses the HEPA filters to remove bacteria, viruses, pollen, dust mite residue, mould fungus spores and other allergens from the air. The integrated carbon filters with activated carbon also remove odours from the air. The prefilters (made of synthetic fibre) filter out large dust particles before the air flows into the HEPA filters.

The HEPA carbon filters are effective against house dust, pet allergens, cigarette smoke, smog and particles which can carry smells and viruses.

The device is equipped with an air quality sensor to display the air quality and control air purification automatically.

The device is equipped with an automatic mode, night mode and turbo mode.

The device has a fully automatic ionisation function in turbo mode. In addition, the device is equipped with an on-demand plasma function. The released ions, radicals and electrodes remove pollen, dust, viruses and bacteria from the room air. Thanks to this air purification method, the quality of the room air can be additionally improved.

The four-stage fan (with turbo mode) and the uncomplicated, quick filter change ensure easy operation.

Thanks to its compact dimensions the device can be transported conveniently, and owing to its low-noise operation it can be used indoors.

The device is equipped with a control panel for operation and a digital display for controlling the functions.

Transport and storage

Note

If you store or transport the device improperly, the device may be damaged.

Note the information regarding transport and storage of the device.

Transport

To make the device easier to transport, it is fitted with a carry handle.

To make the device easier to transport, it is fitted with wheels.

Before transporting the device, observe the following:

- Switch the device off.
- Hold onto the mains plug while pulling the power cable out of the mains socket.
- Only wheel the device on a level and smooth surface.

After transporting the device, observe the following:

- Set up the device in an upright position after transport.

Storage

When the device is not being used, observe the following storage conditions:

- Dry and protected from frost and heat
- In an upright position where it is protected from dust and direct sunlight
- With a cover to protect it from invasive dust, if necessary

Assembly and start-up

Scope of delivery

- 1 x Device
- 2 x HEPA carbon filter
- 2 x Prefilter
- 1 x Manual

Unpacking the device

1. Open the cardboard box and take the device out.
2. Completely remove the packaging.
3. Fully unwind the power cable. Make sure that the power cable is not damaged and that you do not damage it during unwinding.

Start-up

The HEPA carbon filters are pre-installed.

Note

Remove the plastic cover from the HEPA carbon filters. To do so, please proceed as described in the chapter Changing the HEPA carbon filter.

When positioning the device, observe the minimum distance from walls or other objects as described in the chapter Technical data.

- Before restarting the device, check the condition of the power cable. If there are doubts as to the sound condition, contact the customer service.
- Only put up the device in an upright, stable position on firm ground.
- Do not create tripping hazards when laying the power cable or other electric cables, especially when positioning the device in the middle of the room. Use cable bridges.
- Make sure that extension cables are completely unrolled.
- Position the device near the source of air contamination.
- When positioning the device, keep a sufficient distance to heat sources.
- Make sure that no curtains or other objects interfere with the air flow.
- Make sure that the air inlet and outlet are not obstructed.

Connecting the power cable

- Insert the mains plug into a properly fused mains socket.

Operation

Note

Avoid open doors and windows.

Control panel

No.	Designation	Meaning
8	<i>Light</i> button	Setting the control panel illumination.
9	<i>PM 2.5</i> button	Button for indicating the PM 2.5 fine dust value when the device is in automatic mode
10	<i>Ionizer</i> button	Switching the plasma function on or off Press the button for 3 seconds if you want to reset the <i>HEPA carbon filter degree of contamination</i> LED (21) or <i>Prefilter degree of contamination</i> LED (20) after a filter change.
11	<i>Ionizer</i> LED	Illuminated when the plasma function is activated
12	<i>Speed</i> LED	Illuminated according to the selected fan stage: = stage 1 (low) = stage 2 (medium) = stage 3 (high)

No.	Designation	Meaning
13	<i>Operating modes</i> LED	Illuminated according to the selected operating mode: <i>Automatic mode</i> <i>Night mode</i> <i>Turbo mode</i>
14	<i>On/Off</i> button	Switching the device on or off
15	<i>Mode</i> button	Selecting the operating modes
16	<i>Speed</i> button	For setting the fan speed
17	<i>Fine dust value indication</i> LED	Indication of the pollution with particulate matter
18	<i>Air quality fine dust value</i> LED	Illuminated according to the measured air quality: - blue = very good - green = good - orange = medium - red = poor
19	<i>Air quality gaseous pollutants</i> LED	Illuminated according to the measured air pollution: - blue = very good - green = good - orange = medium - red = poor
20	<i>Prefilter degree of contamination</i> LED	Indicates the degree of contamination of the prefilters. The indication <i>Clean</i> is illuminated in red when the prefilters have to be cleaned.
21	<i>HEPA carbon filter degree of contamination</i> LED	Indicates the degree of contamination of the HEPA carbon filters. The indication <i>Change</i> is illuminated in red when the HEPA carbon filters have to be replaced.
22	<i>Lock</i> button	Switching the locking function on and off

Switching the device on

Once you have completely installed the device as described in the Start-up chapter, you can switch it on.

- Press the *On/Off* button (14) to switch the device on.
 - ⇒ The device emits an acoustic signal.
 - ⇒ The *Speed* LED (12) lights up. When the device is switched on, it will start at the last selected fan speed.
 - ⇒ The device measures the air quality within 3 minutes. The *air quality* LED (19) is illuminated.

Setting the operating mode

The device comes with the following operating modes:

- Automatic mode
- Night mode
- Turbo mode
- Ventilation

Automatic mode

When in automatic mode, the device automatically detects the air quality.

Please proceed as follows to set the automatic mode:

- ✓ The device is switched on.
- 1. Press the *Mode* button (15) until the *Auto* LED (13) is displayed.
- ⇒ The device is now running in automatic mode.

If the device is in automatic mode while it is getting dark, the light detection function will react and automatically put the device into night mode.

When the brightness increases, the display illumination will also increase and the fan speed will return to the level last set.

The *Air quality fine dust value* LED (18) or the *Air quality gaseous pollutants* LED (19) is illuminated.

Air quality: fine dust value

Air quality fine dust value LED	Fine dust value indication (PM2.5 value)
Illuminated in blue (very good air quality)	0-55
Illuminated in green (good air quality)	56-100
Illuminated in orange (medium air quality)	101-150
Illuminated in red (poor air quality)	>150

Air quality: gaseous pollutants

Air quality gaseous pollutants LED
Illuminated in blue (very good air quality)
Illuminated in green (good air quality)
Illuminated in orange (medium air quality)
Illuminated in red (poor air quality)

Please proceed as follows to switch off the automatic mode:

1. Press the *Mode* button (15) until the *Auto* LED (13) goes out.
- ⇒ The device switches over to the next operating mode.

Info

Automatic mode and virus filtration

Do not use the automatic mode if the device is used for virus filtration!

The integrated sensors only respond to air pollution caused by fine particulates, pollen or possibly VOC (organic chemical compounds). The device cannot determine the virus load inside the room. It is possible that the automatic mode indicates a "good air quality" even though the virus load in the room is very high. Therefore, when using the device for virus filtration, we recommend that you always select a fixed performance level adapted to the room size or the required circulation rate.

Night mode

Info

In night mode, the ionization function cannot be added.

In night mode, the control panel is dimmed and the device generates an air current that is adapted to your sleep habits.

Proceed as follows to switch on night mode:

- ✓ The device is switched on.
- 1. Press the *Mode* button (15) until the *Sleep* LED (13) is displayed.
- ⇒ The *Sleep* LED (13) is illuminated.
- 2. Press the *Mode* button (15) again to switch off the night mode.

Turbo mode

Note

In turbo mode, the room air is automatically disinfected by means of negative ions. This additional function is only available with activated turbo mode.

In *turbo* mode, the fan runs at the highest fan speed.

- ✓ The device is switched on.
- 1. Press the *Mode* button (15) until the *Turbo* LED (13) is illuminated.
- 2. Press the *Mode* button (15) again to switch off the turbo mode.

Ventilation

In *ventilation* mode, you can select all fan speeds manually.

Please proceed as follows to select the fan stages:

- ✓ The device is switched on.
- 1. Select the desired speed by pressing the *speed* button (16).
- ⇒ The *Speed* LED (12) of stage 1, 2 or 3 is illuminated.
- ⇒ Each time the buttons are operated, an acoustic signal is emitted.

Switching the locking function on and off

The locking function prevents the buttons on the control panel from being used.

Please proceed as follows to lock the control panel:

- ✓ The device must be switched on.
- 1. Simultaneously press the *Speed* button (16) and the *Mode* button (15) for three seconds.
 - ⇒ After approx. 3 seconds, an acoustic signal is emitted.
 - ⇒ The locking function is activated.
 - ⇒ The buttons on the control panel cannot be used.
- 2. Press the *Speed* button (16) and the *Mode* button (15) for three seconds again to deactivate the function.
 - ⇒ The device switches back to the previous operating mode.

Plasma function

The plasma function serves to filter out pollen, dust, viruses and bacteria from the room air by means of the HEPA carbon filter.

Please proceed as follows to activate the plasma function:

- 1. Press the *Ionization* button (10) to activate the plasma function.
 - ⇒ The *Ionizer* LED (11) is illuminated.
 - ⇒ The device starts to filter the room air.
- 2. Press the *Ionization* button (10) again to deactivate the plasma function.
 - ⇒ The *Ionizer* LED (11) goes out.

Illumination

You can reduce the luminous intensity of the LEDs if you want to operate the device at night. You can set high or medium illumination, or switch the lighting off.

- 1. Press the *Light* button (8) to select the desired brightness level.

Shutdown

Warning of electrical voltage

Do not touch the mains plug with wet or damp hands.

- Switch off the device by pressing the *On/Off* button (14).
- Hold onto the mains plug while pulling the power cable out of the mains socket.
- Clean the device according to the Maintenance chapter.
- Store the device according to the Storage chapter.

Available accessories

Warning

Only use accessories and additional equipment specified in the operating manual.

Using insertion tools or accessories other than those specified in the operating manual may cause a risk of injury.

Designation	Article number
HEPA carbon filter, filter class H13	7.160.000.539
Pre-filter	7.160.000.538

Errors and faults

The device has been checked for proper functioning several times during production. If malfunctions occur nonetheless, check the device according to the following list.

The device does not start:

- Check the power connection.
- Check the power cable and mains plug for damage.
- Check the on-site fusing.
- Wait for 10 minutes before restarting the device. If the device is not starting, have the electrics checked by a specialist company or by Trotec.
- Check the air inlet (3) and air outlet (1) for proper fit.

The device is loud or vibrates:

- Check whether the device is set up in a stable and upright position.
- Check the device cover for proper fit.

The device gets very warm, is loud or is losing performance:

- Check the air inlets and air filters for dirt. Remove external dirt.

The device works with reduced capacity:

- Check the HEPA carbon filter for dirt. If necessary, clean or replace the HEPA carbon filter.
- The prefilter is soiled and has to be cleaned. The *Clean* LED (20) is illuminated in red. Clean the prefilter (see chapter Operation and chapter Maintenance).
- The air outlet is obstructed. Make sure that the air outlet is not blocked. Remove any loose objects from the air outlet.
- The HEPA carbon filter's plastic cover was not removed before installation. Take the HEPA carbon filter out of the plastic cover.

The device works with no capacity or the air quality does not improve:

- Check whether any windows and/or doors of the room are open. If so, close them.
- The HEPA carbon filter is not installed. Install the HEPA carbon filter.
- Check the minimum distance to walls or other objects. Position the device a little more in the room's centre if required.

The *air quality* LED is illuminated in red for a longer period of time:

- Check the air quality in the room. The air in the room may be heavily contaminated. Wait for a few minutes to see whether the colour of the *air quality* LED changes.
- The air quality sensor is clogged or soiled. Windows and doors should be closed, otherwise dust and other contamination is able to enter the room. Clean the air quality sensor as described in the Maintenance chapter.

The device gives off an unpleasant odour:

- Check the HEPA carbon filter for dirt. If necessary, clean or replace the HEPA carbon filter.
- Smoke, e.g. dense tobacco smoke, odours and contaminations may be in the air. Ventilate the room.

The *Prefilter degree of contamination* LED (20) is illuminated in red and the indication *Clean* appears:

- Change the HEPA carbon filters as described in the Maintenance chapter.

The *HEPA carbon filter degree of contamination* LED (21) is illuminated in red and the indication *Change* appears:

- Change the HEPA carbon filters as described in the Maintenance chapter.

Your device still does not operate correctly after these checks?

Please contact the customer service. If necessary, bring the device to an authorised specialist electrical company or to Trotec for repair.

Activities required before starting maintenance

Warning of electrical voltage

Do not touch the mains plug with wet or damp hands.

- Switch the device off.
- Hold onto the mains plug while pulling the power cable out of the mains socket.

Warning of electrical voltage

Tasks which require the housing to be opened must only be carried out by authorised specialist companies or by Trotec.

Cleaning the housing

Clean the housing with a soft, damp and lint-free cloth. Make sure that no moisture enters the housing. Protect electrical components from moisture. Do not use any aggressive cleaning agents such as cleaning sprays, solvents, alcohol-based or abrasive cleaners to dampen the cloth.

Note

Clean the air outlet if required.

Remove it from the device and clean it with a soft, damp and lint-free cloth.

Note

Clean the air quality sensor if required.

Carefully clean it from the outside with a soft, damp and lint-free cloth.

Visual inspection of the inside of the device for dirt

1. Remove the air filters.
2. Use a torch to illuminate the openings of the device.
3. Check the inside of the device for dirt.
4. If you see a thick layer of dust, clean the inside of the device with a vacuum cleaner.
5. Reinsert the air filters.

Changing the HEPA carbon filter

Note

Do not operate the device without the HEPA carbon filters inserted!

Note

The HEPA carbon filters cannot be cleaned and must be replaced if necessary.

Note

The lifetime of the HEPA carbon filters depends on the ambient conditions and the application period of the device.

- The HEPA carbon filters have to be replaced as soon as they are dirty. This is brought to light e.g. by a reduced capacity (see chapter Errors and faults).
- Make sure that the HEPA carbon filters and the prefilters are installed before switching the device on.
- Without the HEPA carbon filters and the prefilters, the device cannot fulfil its air cleaner function, and the inside of the device will be soiled.

The HEPA carbon filters have to be replaced in case of heavy soiling. The *HEPA carbon filter degree of contamination* (21) is illuminated.

If required, visually inspect the HEPA carbon filters and prefilters for dirt.

Please proceed as follows on both sides of the device:

1. Remove the air inlet (3) from the device.

2. Remove the prefilter (24) from the device.

3. Pull the strip (25) to take the HEPA carbon filter (26) out of the device.

4. Dispose of the HEPA carbon filter according to the national regulations.
5. Take the new HEPA carbon filter out of the plastic cover.
6. Insert the new HEPA carbon filter (26) into the device. Make sure that the strips (25) are positioned on the outside.

7. Reinsert the prefilter (24) into the device.

8. Put the air inlet (3) back on the device.

9. Press the *Ionizer* button (10) for 3 seconds to reset the HEPA carbon filter or prefilter.

Cleaning the pre-filters

If the *Prefilter degree of contamination* LED (20) lights up and the indication *Clean* appears, the prefilters must be cleaned (see chapter Operation and chapter Errors and faults).

Please proceed as follows on both sides of the device:

1. Remove the prefilter (24) from the device.

2. Clean the filter using a slightly damp, soft, lint-free cloth. If the filter is heavily contaminated, clean it with warm water mixed with a neutral cleaning agent.

3. Allow the filter to dry completely. Do not insert a wet filter into the device!
4. Reinsert the prefilter into the device.
5. Press the Ionizer button (10) for 3 seconds to reset the prefilter.

Activities required after maintenance

If you want to continue using the device:

- Reconnect the device to the mains.

If you do not intend to use the device for a considerable time:

- Store the device according to the Storage chapter.

Technical annex

Technical data

Parameter	Value
Model	AirgoClean® 250 E
Air flow rate with HEPA carbon filter	
Fan stage I	384 m³/h
Fan stage II	503 m³/h
Fan stage III	624 m³/h
Turbo mode	740 m³/h
Ambient temperature	-10 °C to 45°C
Operating range	0 % to 95% RH
Mains connection	220-240 V / 50 Hz
Power consumption	45 W
Nominal current	0.17 A
Sound pressure level (at a distance of 1 m)	56 dB(A)
Dimensions (length x width x height)	360 x 360 x 710 mm
Minimum distance to walls and other objects	
	A: top 30 cm
	B: rear 30 cm
	C: side 30 cm
	D: front 30 cm
Weight	12 kg

Disposal

The icon with the crossed-out waste bin on waste electrical or electronic equipment stipulates that this equipment must not be disposed of with the household waste at the end of its life. You will find collection points for free return of waste electrical and electronic equipment in your vicinity. The addresses can be obtained from your municipality or local administration. For further return options provided by us please refer to our website <https://de.trotec.com/shop/>.

The separate collection of waste electrical and electronic equipment aims to enable the re-use, recycling and other forms of recovery of waste equipment as well as to prevent negative effects for the environment and human health caused by the disposal of hazardous substances potentially contained in the equipment.
